

Pak Source is an authorized distributor of Geami wraps.

Geami WrapPak, made from 100% recycled material, is the combination of two paper types:

- An outer expanded die-cut Kraft paper
- An inner interleaf tissue paper

These two papers work together to produce a cushioned wrapping material that is used as in-the-box protection of products during shipping.

There is no need for tape as die cut cells lock together to hold items in place

- Attractive presentation
- Eliminate need for manual handling and storage space required for bubble and foam wraps
- Colored and logo-printed interleaf tissue available
- Customer experiences and measurements indicate Geami decreases cycle times for wrapping by 35-60% or more
